

APEX Global Multi-Asset Autocallable Note — Series 7

Structured Product Fact Sheet — as at 31 August 2026

Document Code FS-STR-SG-7X-UNSAFE Classification Internal Use Only

SUMMARY RISK INDICATOR 7 / 7 — VERY HIGH RISK COMPLEX PRODUCT / CAPITAL AT RISK

IMPORTANT: This is a Specified Investment Product (SIP) / Complex Product. You may lose some or all of your invested capital. This product is NOT principal-protected, is NOT a deposit, and is NOT covered by the Singapore Deposit Insurance Corporation (SDIC). It is generally suitable only for Accredited Investors, Expert Investors, or Institutional Investors, or for Retail Investors who have passed the relevant Customer Account Review / Customer Knowledge Assessment and provided a signed risk acknowledgement.

Product Description

The Note is a 3-year, non-principal-protected, autocallable structured note linked to the worst-performing of a basket of three underlying assets (a global equity index, a broad commodities index, and a single emerging-market currency pair). The Note pays a contingent coupon of up to 11.5% p.a. only if the worst-performing underlying closes at or above its Coupon Barrier (60% of Initial Level) on the relevant observation date. The Note may be redeemed early (“autocalled”) if the worst-performing underlying closes at or above its Initial Level on any observation date. If not autocalled and the worst-performing underlying closes below its Knock-In Barrier (55% of Initial Level) on the final valuation date, investors receive underlying-linked physical or cash settlement that can be substantially below the amount invested, up to a total loss of principal.

Key Terms

Issuer	Meridian Peak Structured Products (Cayman) Limited
Issuer Credit Rating	BBB (fictional rating agency, illustrative)
Tenor	3 years (36 months), subject to early autocall
Underlyings	Global Equity Index; Broad Commodities Index; USD/IDR exchange rate
Coupon Barrier	60% of Initial Level (observed quarterly)
Knock-In Barrier	55% of Initial Level (observed only at final valuation)
Contingent Coupon	Up to 11.5% p.a., paid only if Coupon Barrier condition is met
Capital Protection	NONE — capital is fully at risk below the Knock-In Barrier
Minimum Investment	USD 250,000 (or SGD/HKD equivalent)
Liquidity / Secondary Market	No public secondary market; early exit only at Issuer's discretion and may be at a significant discount to invested amount
Currency	USD
Regulatory Classification	Specified Investment Product (SIP) / Complex Product under MAS rules
Distributor Restriction	Not offered to Retail Investors without passed CAR/CKA and signed risk acknowledgement

Illustrative Payoff Scenarios

Scenario	Worst-Performing Underlying at Final Valuation	Investor Outcome
Best case	Above Initial Level at an early observation	Autocalled early; principal returned + coupon(s) paid
Moderate case	Between Knock-In Barrier and Initial Level at maturity	Principal returned in full; no coupon if below Coupon Barrier
Worst case	Below Knock-In Barrier (55%) at maturity	Principal loss proportional to decline; total loss possible

Who Is This Product Designed For?

- Sophisticated investors (Accredited / Expert / Institutional) with a Growth or Aggressive Growth risk profile (Risk Score 7-10).
- Investors who can bear total loss of the invested capital without impact on their essential financial needs.
- Investors who do not require liquidity for this portion of capital over the 3-year tenor.
- NOT designed for investors seeking capital preservation, income certainty, or short-term liquidity.

Key Risks

- Capital loss risk: investors may lose part or all of their invested principal; the coupon is not guaranteed.
- Issuer credit risk: repayment depends on the Issuer's solvency; the Note is an unsecured obligation of the Issuer.
- Market/underlying risk: linked to three different, uncorrelated asset classes (equity, commodities, FX), increasing the probability that at least one underlying breaches its barrier ("worst-of" structure).
- Liquidity risk: no public secondary market; early redemption may not be available or may be at a substantial discount.
- Complexity risk: the payoff is non-linear and path-dependent; investors may not fully understand the conditions under which capital is at risk.
- Currency risk: underlying includes an emerging-market currency pair (USD/IDR), which can be highly volatile.
- Concentration risk: not diversified — a single adverse move in any one underlying determines the worst-of outcome.
